IN-LINE
CANADA

In-Line Flow Products We are a global provider of products and engineered solutions for the pipeline, pressure vessel and fabrication industries.

WHY are angle closures being used more frequently in the gas and oil industry?

- ⇒ Because they are user friendly and environmentally safe
- ⇒ When opening an angle closure spillage is more controlled... saving time and costly clean up from environmental contamination

FIGURE 700 QUICK OPENING ANGLE CLOSURE

Our latest Closure was designed from the input of field workers that have hands on experience working with the old style angle closure. The new improvements have the cap staying fully supported by the “center mounted davit arm” allowing the cap to swing open in a full 360 degree circle making operation, maintenance and inspection safe and easy.

The threaded center pin assists the operator with the closing procedure. With the weight “of the cap being fully supported” the threaded center pin makes the cap and hub come together smoothly. This minimizes damage and cross threading, therefore increasing the life expectancy of the Closure.

FEATURES

- Threaded Pin
- Available in Sizes 4” to 16”
- Heavy Duty Center Mounted Davit Arm
- Standard O-Ring
- Pressure Alert Valve

BENEFITS

- ≡ Cap threads on hub easily, cross threading is minimized, increasing the life expectancy
- ≡ Wide range of sizes for all necessary applications
- ≡ Fully supports the weight of the cap making operation, inspection and maintenance safe and easy
- ≡ Eliminating the need to stock expensive custom seals
- ≡ Minimizing unsafe operation, standard on 6” and larger
